Course center Provider: ZIB Zentrum für internationale Bildung
OID: E10369347

Course Locations: Fondazione Fazio Allmayer Palermo Italy;
Category: Teaching Method-Sustainability-Innovation

MOTIVATION

In the context of change and challenges to which academic institutions are called, considering the challenge of teaching and international teacher training practices in the context of sustainability, this course aims to develop innovative methods for learning and teaching in educational and sustainable contexts. The challenge taken up by the course is to promote training activities to promote constant reflection and rethinking of teaching practices with a view to increasing the autonomy of the teachers and the student.

OUTCOMES

At the end of the course, the learners will have theory basis and practical activities to implement in class with students. They will be able to create new lesson inspired to these innovative methods in the context of sustainability, at the same time we will provide materials and procedure to self-educational learning experiences. They will see the learner in a holistic way having an impact to their attitude of teaching in the context of sustainability.

Title: Education for sustainable development – an interdisciplinary and systemic approach to sustainability in schools, adult education centers and companies

This course will present and test with the participants an innovative methodology for implementing and realizing the idea and philosophy of sustainability within the 17 goals of sustainability proposed by the ONU. The methodology can be transferred and used in different educational fields like language learning, policy, ecology, nature pedagogy and others.

Course fee: 700 Euros
